

Crop Field (HCF)

The Crop Field (HCF) map class represents two NVCS Formations: Annual Close-grown Forbs and Grasses (V.D.2.C.a) and Annual Row-crop Forbs and Grasses (V.D.2.C.b). These Formations are planted/cultivated types within the NVCS. HCF describes lands cultivated for row crops (e.g., corn, soybeans) or improved pasture of monotypic annual or biennial herbaceous vegetation (e.g., alfalfa, clover). All HCF are located outside EFMO lands.
